Summary

- Motivated and detail-oriented full-stack software engineer graduate from Langara College and pursuing a Bachelor of Information Technology at Kwantlen Polytechnic University With a solid foundation of 2 years in software development, particularly focused on back-end and server-side technologies, I bring a unique perspective to troubleshooting and technical support.
- Proficient in all stages of the software development cycle, from requirements gathering and planning to development, testing, bug fixing, and post-deployment system maintenance.
- Skilled in developing usage processing and billing systems, with experience supporting end-users.

Education

Bachelor of Technology: Information Technology

School of Business, Kwantlen Polytechnic University

Major: Mobile and Web Application Development

Expected Graduation: May 2025

Surrey, BC

Courses:

- **Networking Essentials:** Covered fundamental networking concepts such as TCP/IP, OSI model, routing, switching, and subnetting. Learned how to configure and troubleshoot network devices like routers and switches, ensuring smooth communication between devices and optimizing network performance.
- **Security Fundamentals for IT Professionals:** Introduced fundamental concepts of cybersecurity and information security management. Included threat assessment, risk management, encryption techniques, access control mechanisms, and security policies Learned how to identify and mitigate security risks to protect organizational assets.
- **Operating Systems Concepts:** Explored the principles and functionality of operating systems. Included process management, memory management, file systems, and I/O systems. Students learned about kernel architecture, scheduling algorithms, memory allocation techniques, and disk management strategies. Emphasis was placed on understanding how operating systems managed hardware resources and provided a platform for running applications efficiently. Hands-on exercises and projects involved programming assignments, system administration tasks, and experimentation with operating system internals.
- **Advanced Web Development:** Developed proficiency in web technologies like HTML, CSS, PHP, and frameworks such as React or Angular, while learning about client-server architecture, RESTful APIs, and web application security, to design and implement dynamic and responsive web solutions.
- **Mobile Application Development:** Explored mobile platform development using tools like Android Studio or Xcode, gaining hands-on experience in building native or cross-platform mobile applications, understanding user interface design, and integrating device features such as GPS or camera functionality.

Associate of Science Degree: Computer Science

Langara College

January 2020 – January 2022

Vancouver, BC

Courses:

- **Algorithms and Data Structures:** Studied fundamental algorithms and data structures, including sorting algorithms, graph algorithms, and data organization techniques, to optimize program efficiency and solve complex computational problems.
- **Object-Oriented Programming:** Explored the principles of object-oriented design and programming paradigms, gaining proficiency in languages such as Java or C++, and developing skills in encapsulation, inheritance, and polymorphism for creating modular and maintainable software systems.
- **Software Engineering Principles and Project Management:** Learned software development methodologies such as Agile or Scrum, and practiced techniques for requirement analysis, design, implementation, testing, and maintenance, ensuring the delivery of high-quality software solutions within time and budget constraints.
- **Database Management Systems:** Acquired knowledge of relational database concepts, SQL querying, normalization techniques, and database design principles, enabling the development of efficient and scalable database-driven applications.

Work Experience

Junior Software Developer (Part-time Remote)

DHT Technologies (CANADA) Inc.

January 2022 – Present

Ottawa, ON

Project Contribution:

1. Internal Data Migration Web Application for a Canadian telecommunication company

Team members: 20+

July 2022 – Expected July 2024

- Collaborating with the BA team and client to gather and analyze the requirements, documents, and legacy system for migrating over **15 million data** in different types (Customer Profiles, Invoices, Services, Adjustments, etc.) and designing mapping documents with **Wiki.js**.
- Collaborating with the Develop team to integrate the **Back-end** for migration tool using **Java, Spring Boot with RESTful API**, and taking full responsibility for implementing the **ETL process** of Invoices, and Adjustments.
- Utilizing **Java** to implement a migration reporting tool to extract data from source and destination Oracle databases and compare **15 million data** after migration. Optimizing the reporting tool to run and generate CSV files **85% faster** than the requirement.
- Gaining familiarity with **JIRA, Docker, Kubernetes, and OpenShift** for project management and deployment while exploring their functionalities within the context of the project.

2. Data Mapping and Importing tool

Team member: 1

May 2023 – January 2024

- Working directly with the client and utilizing **Java** to implement a tool to take an XML file from a system as input and do the mapping to generate a new XML file that is able to integrate into another system.

3. AI Support Chatbot

Team member: 5

May 2024 - Current

- Implementing **Llamaindex** and **OpenAI** to create an internal support chatbot for the billing system of the telecommunication company.
- Gaining knowledge about the Assistant API to enable seamless interactions between the chatbot and internal systems.
- Utilizing Embedding techniques to enhance the chatbot's understanding and processing of user queries.
- Exploring and applying RAG (Retrieval Augmented Generation) to improve the chatbot's response accuracy and relevance by retrieving and utilizing relevant documents

Skill gained: Java, Spring Boot, JIRA, RESTful API, Postman, Oracle Database, DBeaver, Agile Methodology, Llamaindex, OpenAI.

Technical Skills

Programming Language: Java, JavaScript, C/C++, PHP, C#, HTML/CSS

Tools: Git, GitHub, Gitlab, DBeaver, Docker, OpenShift, Wiki.js, JIRA

Database: Oracle, MySQL, MongoDB

Libraries/Frameworks: Spring Boot, Bootstrap, Junit, Llamaindex

Language: Vietnamese (Native), English (fluent)

Soft Skills

- Exceptional interpersonal skills enable effective collaboration with team members and foster a positive work environment.
- Demonstrated adaptability in managing diverse tasks and priorities, ensuring seamless workflow even in dynamic environments.
- Proven problem-solving aptitude, coupled with critical thinking, enables the resolution of complex issues with innovative solutions.
- Commitment to continuous learning and self-improvement drives ongoing skill development and adaptation to emerging technologies.
- Exceptional attention to detail ensures accuracy and precision in all aspects of work, minimizing errors and optimizing outcomes.
- Proactive attitude and self-motivation drive initiative and resourcefulness in tackling challenges and seizing opportunities.
