WORK EXPERIENCE

DHT Technologies Inc. (a vendor of Bell Canada)

Jan 2022 – Present

Technical Support Specialist — Enterprise Billing Systems

Remote

- Served as the sole owner of production incident resolution for Bell Canada's enterprise billing system — independently diagnosing root causes, implementing direct fixes on live systems (SQL, data corrections, config changes).
- Investigated deeply complex, multi-layered system issues by writing advanced Oracle SQL queries and analyzing real-time application logs — going well beyond surface-level symptoms to identify root causes that recurring tickets had missed, reducing repeat incidents by 30%.
- Owned the full incident lifecycle end-to-end: triage → independent root cause analysis → direct production fix → post-fix validation — minimizing escalation to engineering by always attempting a comprehensive solution first.
- Monitored daily billing procedures and scheduled jobs by reviewing application logs and system outputs — proactively identifying and resolving errors before they impacted downstream processes or customer-facing operations.
- Participated in 24/7 on-call rotations, managing urgent technical escalations with a calm, solution-focused approach under high-pressure SLA targets.
- Collaborated with Bell Canada's customer service agents (CSR) and business teams to deeply understand the user-facing impact of billing issues, translating complex technical findings into clear, empathetic, and actionable resolutions — ensuring both technical accuracy and customer satisfaction.
- Built an AI-powered support agent using **Claude Code**, connected to the internal ticket database for historical incident lookup and directly integrated with a test database and sandbox environment — allowing team members to self-investigate customer-reported issues, query past resolutions, and reproduce defects end-to-end with minimal engineering involvement, reducing resolution time by 75%.
- Partnered with engineering and product teams to communicate recurring defect patterns, providing principled, data-driven findings that informed long-term fixes rather than short-term patches.
- Authored troubleshooting guides and technical documentation in Wiki.js and Confluence — synthesising complex engineering findings into structured resources that reduced future resolution time and enabled the broader support team to resolve a wider class of issues independently.

PROJECTS

Cybersecurity Training Platform | Java Spring Boot, AWS, Docker

2024

Tech Leader

KPU Capstone

- Led full-stack development of a cybersecurity e-learning SaaS platform with structured courses, quizzes, and role-based access control using Java Spring Boot, ReactJS, and MySQL.
- Implemented JWT and OAuth2 authentication with Spring Security; deployed on AWS (EC2, S3, RDS) with Docker containerisation and CI/CD pipelines.

KEY STRENGTHS

- Client-first ownership mindset — treats every customer problem as something to be fully solved, not triaged and passed on
- Clear communicator across audiences — able to translate complex technical findings into plain language for non-technical stakeholders while maintaining precision with engineering teams; proactively communicates throughout the resolution process.
- Deep technical investigator — comfortable getting into the weeds of complex system issues; never escalates without first attempting a comprehensive, principled solution.
- Strong ownership mindset — treats every customer problem as something to be fully solved, not triaged and passed on.
- Continuous learner — committed to staying updated with current industry trends and best practices

TECHNICAL SKILLS

Support & Monitoring: Incident management, root cause analysis, SLA-driven support, log analysis, API troubleshooting, data investigation

Languages & Frameworks: Java, JavaScript, SQL (Oracle, MySQL), Spring Boot, ReactJS, REST API, PHP, HTML/CSS

Tools: JIRA, Postman, Confluence, Wiki.js, Git, Docker, AWS (EC2, S3, RDS), Maven, JWT, OAuth2

Databases: Oracle SQL (advanced), MySQL

Methodologies: Agile, Scrum, ETL, Root Cause Analysis, Technical Documentation

EDUCATION

Bachelor of Technology: Information Technology | Mobile and Web Application Development
Kwantlen Polytechnic University

May 2022 – May 2025
Surrey, BC

Associate of Science Degree: Computer Science
Langara College

Jan 2020 – Jan 2022
Vancouver, BC
